

Stump grinding project summary

Record what you already know, then copy or print a clear scope to discuss with a provider. No name, email, or service request is needed.

Observe first. Do not prepare a hazardous work area.

Observe only from safe, accessible places. Do not dig, probe, cut roots, move utility flags, climb, or operate equipment to fill this in. A worksheet or utility ticket is not confirmation that work can safely begin.

What belongs in the scope discussion?

- ☐ One or more stumps to discuss
- ☐ A narrow gate or tight turn
- ☐ Steps, a slope, or soft ground
- ☐ Nearby irrigation, lighting, or other private lines
- ☐ A plan to replant or build in this area
- ☐ Chip removal or lawn restoration to discuss

Stump count and approximate visible sizes

Known access conditions

What would you like the area used for?

Gate width, utility-plan questions, and other observations

Record only details already known or safely visible. Do not include addresses, personal documents, access codes, or sensitive information. A blank or checked box is not a safety clearance.

Independent information from The Local Lookout LLC. No provider is currently assigned. This sheet is not a quote, work authorization, or service request.

Compare the written scope.

Ask each provider the same questions. Confirm the property, work, exclusions, and any changed price before approving a job.

Questions to ask

- ☐ Which stumps, visible surface roots, and grinding depth are included?
- ☐ Who confirms equipment access, utility responses, private lines, and any necessary permissions?
- ☐ Do chips stay, get redistributed, or get hauled away?
- ☐ Are backfill, topsoil, grading, seed, and restoration included or separate?
- ☐ Will the quote explain exclusions, added charges, and approval for changes?

Included work / exclusions / separate charges:

Useful information to bring

- ☐ A wide view of the stump and surrounding area
- ☐ A clear view of the cut surface and visible root flare
- ☐ A view of the access route and narrowest known opening
